

DAKOTA[®]

 Drainage Products

Innovative Building Solutions

PRODUCTION AND DISTRIBUTION OF CONSTRUCTION PRODUCTS

Eight divisions, more than four thousand innovative products dedicated to construction, fast deliveries, and more than 40 years of experience. High quality Italian designed and manufactured products for indoor and outdoor applications including drainage, flooring, landscaping and more.

Investing In Innovation Since 1980

It was only in 1980 when our first plastic injection machines were brought into operation for the moulding of construction products. Today, over forty years later, with more than 140 state-of-the-art moulding machines, the Dakota Group remains committed to developing and supplying innovative products for the construction industry. We consistently expand our product range and innovate on our production technologies - making our products increasingly advanced, higher performing, and occasionally unique.

Innovate to evolve. The only way forward.

Dakota Drainage Products

Channel drains, also known as trench drains, are arguably the most important component of modern drainage systems. Dakota Channel Drains and Catch Basins (Catchpits, Inspection Chambers) are an excellent choice for effective drainage solutions. Our wide range of innovative products offer numerous advantages that make them stand out in the market.

The main advantages of Dakota Channel Drains and Catch Basins are:

Two ranges of Channel Drains to choose from

The TAURUS® range is our professional quality, heavy duty, product line with extra thick walls and high strength offering solutions all the way from around the home right up to the heaviest applications for ports, airports, etc. The PEGASUS® product line is designed and constructed for domestic and lighter vehicle applications.

An extensive, industry leading, range of Catch Basins

The catch basins are made from polypropylene and are available in a range of sizes, from 200mm to 700mm (8" to 28") square, to suit any application. Siphoned traps are also available for many of the products to prevent drain odours.

Superior Drainage Performance

Dakota Channel Drains and Catch Basins are designed to efficiently collect and channel water, preventing pooling and potential water damage. Their advanced designs ensure effective water flow, reducing the risk of flooding or water accumulation. Channels are designed with lateral and bottom connection outlets, as well as with provision for T-joints and Cross-overs where possible, so no need to buy extra components.

Durable and Long-Lasting

These products are built to withstand heavy loads and harsh weather conditions, ensuring long-term durability. Made from high-quality HDPE or PP materials, Dakota Channel Drains and Catch Basins offer exceptional strength and resistance, making them a reliable choice for both residential and commercial applications. Most catch basins are offered with options for odour control as well as with a wide variety of lids or gratings to suit every requirement.

Easy Installation and Maintenance

Installing Dakota Channel Drains and Catchpits is a hassle-free process, thanks to their user-friendly slot together design. With simple installation instructions and minimal maintenance requirements, these products provide convenience and time-saving benefits.

Versatile Applications

Dakota Channel Drains and Catchpits are suitable for various applications, including driveways, patios, poolside, gardens, parking, roadway and commercial areas. Their versatility allows for seamless integration into different landscapes, providing effective drainage solutions wherever needed.

Aesthetically Pleasing

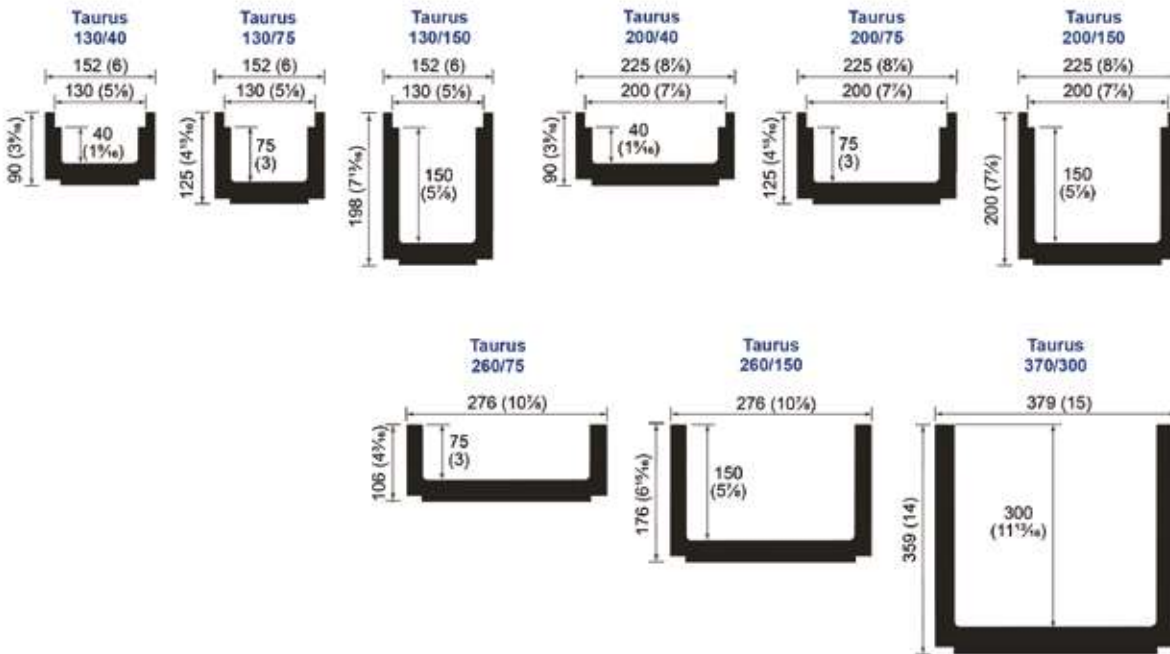

In addition to their functional benefits, Dakota Channel Drains and Catchpits are aesthetically pleasing. They feature a range of grate types, materials and designs that complement any outdoor space, enhancing visual appeal while efficiently managing water drainage.

Overall, Dakota Channel Drains and Catch Basins offer superior design, superior drainage performance, durability, easy installation and maintenance, versatility, and aesthetic appeal. The products are **made to meet or exceed the DIN19580 / EN 1433 standards** - the only recognized international standard written specifically for Channel / Trench Drains. These qualities make them an excellent choice for anyone seeking reliable and efficient drainage solutions.

Please note: All imperial measurements shown in this brochure are to the nearest common fraction. For exact dimensions please refer to metric measurements.

TAURUS® Line *Heavy Duty Professional Range*

all Classes up to F900 (90 metric tonne / 99 US tons)

PEGASUS® Line *Domestic and Light Traffic*

Classes A15 up to C250 - up to (25 metric tonne / 27 1/2 US tons)

S

Load Classes

ACCORDING TO THE BS EN 1433 STANDARD

CLASS A

15 kN / 3,372 lbs. load test = 1.5 metric tonnes / 1.65 US tons
Group 1: Areas that can be used only by pedestrians and cyclists.

CLASS B

125 kN / 28,100 lbs. load test = 12.5 metric tonnes / 13.7 US tons
Group 2: Pavements, pedestrian areas and comparable areas, parking for private cars or multilevel car parks.

CLASS C

250 kN / 56,200 lbs. load test = 25 metric tonnes / 27.5 US tons
Group 3: Road curbs and areas not directly exposed to vehicle traffic or similar, commercial parking lots and general commercial areas.

CLASS D

400 kN / 89,920 lbs. load test = metric 40 tonnes / 44 US tons
Group 4: Roads with heavy traffic (including pedestrian streets and parking areas for all types of road vehicles).

CLASS E

600 kN / 134,800 lbs. load test = metric 60 tonnes / 66 US tons
Group 5: Areas subjected to extremely heavy vehicles traffic, e.g. fuel stations, industrial and warehouse roadways and loading bays

CLASS F

900 kN / 202,320 lbs. load test = metric 90 tonnes / 99 US tons
Group 6: Areas subjected to very high wheel loads, e.g. docks and airports.

TAURUS® Channel 130/40 (5" x 1⁹/₁₆")

Used for the collection and drainage of rainwater and for the discharge of liquids for industrial use. The HDPE material has an excellent resistance to chemicals and organic agents and it is "self-cleaning". This channel is shock resistant, unbreakable and can guarantee high performances in temperatures from -40°C to 100°C (-40°F to 212°F). Available in black, in different designs and depths

Lateral outlet diameter is 50mm (2"), bottom outlet diameters are 75mm, 100mm (3", 4")

Made of PE-HD (high-density polyethylene).

It can be combined with a wide range of gratings in order to be used in pedestrian areas, driveways, roads and highways.

TAURUS® Channel 130/75 (5" x 3")

Used for the collection and drainage of rainwater and for the discharge of liquids for industrial use. The HDPE material has an excellent resistance to chemicals and organic agents and it is "self-cleaning". This channel is shock resistant, unbreakable and can guarantee high performances in temperatures from -40°C to 100°C (-40°F to 212°F). Available in black, in different designs and depths

Lateral inlet diameter is 63mm (2½"). Bottom outlet diameters are 75mm, 100mm (3", 4") or 110mm (4½") with adaptor POX96-1319. Taurus channels are compatible with reinforcement profile (POZ95-1317). With this profile you can get up to F900 loading capacity.

Made of PE-HD (high-density polyethylene).

It can be combined with a wide range of gratings in order to be used in pedestrian areas, driveways, roads and highways.

TAURUS® 260 (10") Channels

Used for the collection and drainage of rainwater and for the discharge of liquids for industrial use. These channels can be combined with a wide range of gratings in order to be used in pedestrian areas, driveways, roads, highways, ports and airports.

The HDPE material has an excellent resistance to chemicals and organic agents and it is "self-cleaning". This channel is shock resistant, unbreakable and can guarantee high performances in temperatures from -40°C to 100°C (-40°F to 212°F).

Available only in black, equipped with edge rails, cast iron gratings (with the desired load class) and 8 anchor brackets.

Lateral inlet diameters are 50mm, 63mm (2", 2½"), bottom outlet diameters are 140mm, 160mm (5½", 6½").

Made of PE-HD (high-density polyethylene). The accessories are made of galvanised steel, the gratings are made of cast iron.

TAURUS® Channel 370/300 (15")

Used for the collection and drainage of rainwater and for the discharge of liquids. These channels are designed for heavy duty usage in industrial applications, highways, ports and airports.

The HDPE material has an excellent resistance to chemicals and organic agents and it is "self-cleaning". This channel is shock resistant, unbreakable and can guarantee high performances in temperatures from -40°C to 100°C (-40°F to 212°F).

Available only in black, equipped with steel reinforcement profiles and pre-assembled with cast iron gratings (the load class is determined by the gratings used).

Lateral inlet diameters are 110mm, 160mm, 200mm (4½", 6½", 8"), bottom outlet diameters are 110mm, 160mm, 200mm (4½", 6½", 8").

Made of PE-HD (high-density polyethylene). The accessories are made of galvanised steel, the gratings are made of cast iron.

THIS MODEL IS SOLD ALREADY EQUIPPED WITH REINFORCED PROFILE AND LOCKING SYSTEM (SCREWS AND BOLTS)

PEGASUS® Plus One S 100/35 (4" x 1³/₈")

with plastic gratings

Used for the collection and drainage of rainwater. The PEGASUS® Plus One S is a specially designed ultra-slim channel, available in a range of colours complete with matching gratings, for use across garage entrances, in patios and other areas around the home. Also available with galvanised or stainless steel gratings in a variety of patterns.

Made to the EN1433 standards, PEGASUS® Plus One S channels are made of PP (polypropylene), engineered and reinforced to be highly resistant. Colours in stock: grey and black. These channels, on specific request, are also available in sand or white.

These channels, with pre-mounted gratings, can be used in pedestrian or light traffic areas.

Lateral inlet diameter is 32mm (1¹/₄"), bottom outlets are 40mm, 63mm (1⁵/₈" , 2¹/₂").

PEGASUS® Plus One S 100/35 (4" x 1 3/8")

with galvanised steel gratings

Used for the collection and drainage of rainwater. The PEGASUS® Plus One S is a specially designed ultra-slim channel, available in a range of colours complete with matching gratings, for use across garage entrances, in patios and other areas around the home. Also available with galvanised or stainless steel gratings in a variety of patterns.

Made to the EN1433 standards, PEGASUS® Plus One S channels are made of PP (polypropylene), engineered and reinforced to be highly resistant.

Colours in stock: grey and black. These channels, on specific request, are also available in sand or white.

For rainwater collection and drainage. The use of stainless steel and galvanised gratings also makes these channels ideal for bathrooms, around pools, locker rooms and for the food industry.

PEGASUS® Short Channel 130 (5")

Used for the collection and drainage of rainwater. The PEGASUS® Short range is easy to handle and is particularly suited for smaller projects like garage entrances, patios and other areas where longer runs of drainage are not required. Available in grey only with gratings in a variety of patterns to suit requirements.

PEGASUS® Short channels are made of PP (polypropylene), engineered and reinforced to be highly resistant.

Bottom outlets: 130/40, 130/75 - 50mm, 75mm (2", 3"); 130/140 - 50mm (2").

Suitable for use in pedestrian or low density traffic areas with its matched sets of gratings.

PEGASUS® Multi-Packs

PEGASUS® 130/75 (5" x 3") Bundle Kits - 3m (10ft)

Kits comprise 3 PP channels dimensions 130 x 75 x 1,000mm (5 x 3 x 39³/₈") in grey or black. Supplied complete with 1 set of end caps and a choice of PP or galvanised gratings. Shrink-wrapped in bundles. Sold as complete kits only.

Materials - Channels made of PP (polypropylene), gratings made of PP or galvanised steel.

Use - Used for the collection and drainage of rainwater, particularly in the connection between ramps and garage entrances and/or for sub-surface rooms.

Catch Basins

Dakota Catch Basins and their accessories are widely used in place of traditional concrete installations due to their low weight, easy handling and overall strength and performance capabilities.

The catch basins are made from polypropylene and are available in a range of sizes, from 200mm to 700mm (8 to 28") square, to suit any application. Siphoned traps are also available on many of the products to prevent drain odors.

The catch basins can be stacked, to create vertical extensions, in cases where very deep excavations are encountered, and allow fast and precise connection for piping of all sizes.

The range of accessories (covers, gratings, extenders, frames, odour traps, etc.) expand the usage potential and enable compatibility with concrete catch pits.

Catch basins, also known as catchpits or stormwater basins, serve several important purposes in drainage systems:

Sediment and Debris Removal

Catchpits act as interception points for stormwater, allowing the removal of sediment and debris before it enters the main drainage system. This prevents clogging and extends the life of the overall drainage infrastructure.

Water Quality Improvement

By capturing pollutants and contaminants in stormwater runoff, catchpits contribute to improving water quality. This is especially important in urban areas where runoff can carry pollutants from roads and other surfaces into water bodies.

Preventing Flooding

Catchpits play a crucial role in preventing local flooding by efficiently collecting and channeling excess water during heavy rainfall. This helps in reducing the risk of water accumulation on streets and other public spaces.

Preventing Odour Escape

Well designed, modern, plastic catchpits will have provision for the installation of siphonic water traps to ensure that foul-smelling gases produced in the sewer system are trapped below the water level in the bend of the trap. This prevents these gases, which can carry unpleasant odours, from rising up through the drain and contaminating the neighbouring environment.

Erosion Control

The proper management of stormwater through catchpits helps control erosion by preventing excessive runoff that can wash away soil and contribute to soil degradation.

Smart Catch Basins

The "Smart" range of catch basins (inspection chambers), are available in various sizes from 200mm - 550mm (8" - 21") square in grey.

Main characteristics:

- Light weight for easy transport, positioning and installation, even by a single person
- High resistance thanks to the rounded side reinforcements that help prevent breakages at the corners
- Pipes of many sizes can easily be fitted thanks to the special pre-cut concentric shapes for the side holes

- Storage space reduced by half, thanks to the hi-stacking (nesting) design
- Compatible with a range of matched sizes of PP inspection chamber covers and gratings
- Slot in plates available to create siphonic system for odour control

Made of PP (polypropylene).

Use: Used as an alternative to traditional concrete catch basins for rain and storm water collection. Also suitable for housing sub-surface electrical devices/cables.

Plus Catch Basins

plastic catch basins for drainage systems

The "Plus" drainage inspection chambers, also known as a catch basins or catch pits, are available in various sizes, from 200mm - 550mm (8" - 21½") square in grey and green.

Main characteristics:

- Light weight for easy transport, positioning and installation, even by a single person
- High resistance thanks to the reinforcements and ribs at the sides

- Pipes of many sizes can easily be fitted thanks to the special pre-cut concentric shapes for the side holes
- Compatible with a range of matched sizes of PP inspection chamber covers and gratings
- Slot-in plates available to create siphonic trap for odor control

Made of PP (polypropylene).

Use: Used as an alternative to traditional concrete catch basins for rain and storm water collection.

Standard Catch Basins

The "Standard" drainage inspection chambers, also known as catch basins or catch pits, are available in 200mm and 300mm (8" and 12") square in grey.

Main characteristics:

- Light weight for easy transport, positioning and installation, even by a single person
- High resistance thanks to the reinforcements and ribs at the sides
- Pipes of many sizes can easily be fitted thanks to the special pre-cut concentric shapes for the side holes

- Compatible with a range of matched sizes of PP inspection chamber covers and gratings
- Pre-cut pipe inlets: POZ01-1372E - 63, 85 and 100mm (2½, 3⅓ and 4")
- POZ01-1373E - 85, 100, 130 and 145mm (3⅓, 4, 5 and 5¾")

Made of PP (polypropylene).

Use: Used as an alternative to traditional concrete catch basins for rain and storm water collection.

Seventy Catch Basins

extra large 'Seventy' catch pit

Extra Large catchpit, dimensions: 735mm x 735mm x 650mm (28" x 28" x 25½").

Main characteristics:

- Light weight for easy transport, positioning and installation, less than 25kgs / 55lbs
- High resistance thanks to the reinforcements and ribs at the sides
- Pipes of many sizes can easily be fitted thanks to the special pre-cut concentric shapes for the side holes
- Space at top corners for connecting 1" to 2" pipes
- Pre-cut on the bottom for removal for stacking for height extension - can also be cut horizontally every 10cm (4")
- Compatible with a cast iron manhole cover, or with the special 'Seventy' covers
- The internal dimensions are 600mm (24") square (mansize)
- Pre-cut pipe inlets: 200, 250, 315, 400 and 500mm (8, 10, 12, 16 and 20")

Made of PP (polypropylene).

Use: Used as a valid alternative to traditional concrete wells and particularly suitable for housing hydraulic and/or electrical devices for earthed systems. The Seventy manhole is the largest on the market and, unlike traditional concrete manholes, it is produced with a removable bottom and can be lifted by a person rather than by a crane!

POZ04-7070TV	Green Frame for 'Seventy' Catchpit	700 x 700	27½ x 27½	1 pc.	19 pcs.

Cover & Frame for 'Seventy' Catchpit

The cover is a PP reinforced “plate” with 5 fiber-reinforced beams, laterally interlocked on the underside. The external surface is fitted with inserts of non-slip rubber and a pair of ergonomic retractable handles.

Capacity: 35 KN (approx. 3.500 kgs / 7,700 lbs).

Cover made of PP (polypropylene), fiber-reinforced nylon and rubber. Frame made of PP (polypropylene).

Use: Used to cover the Catchpit, allowing inspection and providing an excellent alternative to traditional concrete catchpit covers.

Rainwater Gullies

"Pluvial" gully stormwater catch basin

The "pluvial" gully pot is designed for the collection of storm water from gutter downpipes and its disposal into drainage systems.

A bulkhead (provided with each catch basin) enables a perfect siphon effect, preventing the return of bad odours. The bulkhead can be easily removed for inspection and/or cleaning.

Main characteristics:

- Light weight and easy to install
- High resistance thanks to the reinforcements and ribs at the sides
- Adaptor accessories available for both round and square down pipes. Sizes: round 80mm - 100 mm (3½" - 4") and 90mm - 110mm (3½" - 4½"), square 80mm - 100 mm (3½" - 4")
- Supplied with siphon bulkhead - prevents bad odors
- Sealed design prevents contamination and clogging with debris and leaves.

Made of PP (polypropylene).

Use: Collection and dispersal of storm water.

Rainwater Gullies / Catch Pits / Sumps

"Eco-Pluvial" gully

The eco-pluvial sump is a device used to collect water from the eaves/downpipes and to drain it.

It has several components:

- a tilting anti-backflow barrier, preventing the return of bad odors
- a removable basket for collecting debris
- pilasters to provide support
- a cover with different sizes, 80mm - 125mm (3½" - 5") for the inlet pipe
- photo-etched "open-closed" cover (customisable)
- an outlet fitting for a drain pipe with a diameter of 80mm/100mm/110mm (3½" - 4")
- a limit stop to control the water flow

Made of PP (polypropylene).

Use: Collection and dispersal of storm water.

Hermetic Chambers for Electrical use

"Airtight" versions of Dakota drainage inspection chambers, also known as catch basins or catch pits, are provided with a hermetic seal and pre-cut outlet points on the bottom, with the possibility of mounting press tube fittings.

Many of the different size Dakota Catch Basins can be made waterproof with the use of a special seal and cover, thus providing a wide choice for installations of underground electrical cabling and junctions.

The advantages of hermetically sealed catchpits, including water resistance and corrosion prevention, make them essential for the installation of sub-surface electrical services. Their use enhances the reliability, safety, and longevity of electrical infrastructure in both urban and industrial settings, as well as providing easy access for maintenance purposes.

Code	Product	Size mm (W x D x L)	Size in. (W x D x L)	Pack size	Pallet
POZ10-1347	Hermetic Catchpit for Electrical Installations	250 x 250	10 x 10	1 pc.	96 pcs.

Hermetic "Airtight" Chamber

This 250mm - 250mm (10" - 10") airtight catch basin with allows easy placement of components for junctions in cables, ensuring adequate protection and air tightness, due to the provided rubber gasket and screws for fastening down the lid. It has pre-cut outlet points on the bottom and can be drilled to accept all standard waterproof electrical sealing glands.

Made of PP (polypropylene).

Used for the grounding of electric cables, allowing the easy placement of the components of the junctions and cables and providing adequate protection against water ingress. This product is ideal in conjunction with poles for public lighting, or for routing and connection of telephone and IT cabling services.

Hermetic Catch Basin Covers & Gaskets

Airtight covers and waterproofing gaskets to fit Dakota Catch Basins to make them suitable for housing electrical components and junctions.

Made of PP (polypropylene).

Used to create a waterproof enclosure for sub-surface electrical cables and components.

Catch Basin Accessories

Dakota offers a wide range of accessories, covers, gratings and frames to go along with the different sizes and types of catch basins.

Most catch basin are offered with options for creating siphon traps for odour control, as well as different choices of cover styles, etc. Our aim is to offer the

widest choice to customers to better meet exact requirements.

Dakota accessories allow customisation of the products to suit most requirements for functionality and appearance.

Siphon Plates for Standard & Plus Catch Basins

The siphon plate is placed inside the catchpit, using the location grooves. This creates a siphoning effect and water barrier to prevent drain odors. The plates are available in grey and in various sizes to fit 200mm, 300mm, 400mm and 550mm (8", 12", 16" and 21⁷/₁₀" square catch basins.

Made of PP (polypropylene).

Use: Used to allow the siphoning of the catch-pit, thanks to the easy application system.

Note: Not compatible with 'Smart' Catch Basins.

Code	Product	Pack size	Pallet
POZ06-1378	Siphon Plate 200mm (8")	300 pcs.	9,000 pcs.
POZ06-1379	Siphon Plate 300mm (12")	170 pcs.	2,040 pcs.

POZ06-1389	Siphon Plate 550mm (21 ⁷ / ₁₀ ")	20 pcs.	480 pcs.

Catch Basin Covers with Handle

Inspection chamber cover with a built-in, fold flush handle for easy lifting. The handle, in case of breakage or damage, can be replaced.

Available in 200mm, 300mm, 400mm and 550mm (8", 12", 16" and 21⁷/₁₀" square in grey or green.

Made of PP (polypropylene).

Use: As an inspection hatch to allow access to the catchpit.

Catch Basin Accessories

Catch Basin Covers with Siphon

Catch basin cover with a built-in, centrally position, siphoned inlet grating which allows the collection and flow of water as well as preventing any emission of unpleasant drain odours.

Made of PP (polypropylene).

Available in 300mm, 400mm, 450mm and 550mm (12", 16", 18" and 21⁷/₁₆") square in grey or green..

Use: As an inspection hatch to allow access to the catchpit whilst also acting as an odor trap.

Code	Product	Pack size	Pallet
POZ09-1361S Grey	Cover with Siphon 300mm (12") sq.	1 pc.	240 pcs.

POZ09-1381S* Grey	Cover with Siphon 550mm (21 ⁷ / ₁₆ ") sq.	1 ps.	68 pcs.

* special order only

Catch Basin Height Extenders

This accessory enables height extension of the various catch basins in steps of 100mm (4") or 130mm (5") (POZ05-1377B only).

Available in the sizes of 200, 300, 400 and 550mm in grey.

Made of PP (polypropylene).

Use: It is placed on the top of the catchpit, in order to increase the height. Very useful for installations in sloped surfaces and where additional depth may be required.

Code	Product	Pack size	Pallet
POZ05-1382	Catchpit Extension 200mm (8") square	1 pc.	240 pcs.
POZ05-1376	Catchpit Extension 300mm (12") square	1 pc.	120 pcs.
POZ05-1377	Catchpit Extension 400mm (16") square	1 pc.	60 pcs.
POZ05-1377B	Catchpit Extension 550mm (21 ⁷ / ₁₆ ") square	1 pc.	44 pcs.

Bell Siphon for Catch Basins

The bell siphon is an accessory applicable to all our catchpits. Available for models 300mm and 400mm (12" and 16") square in grey.

Made of PP (polypropylene).

Use: It is used to create a "siphon effect" inside the catchpits. It is very easy to apply and to inspect. It is designed and structured to prevent the emission of bad odors and drain smells due to the stagnation of water. Perfectly matched with grating catchpit covers.

Code	Product	Pack size	Pallet
